

Best Practices for Expressing, Storing and Handling Breastmilk for Donation

BEFORE PUMPING

- Wash hands well.
- Remove excess topical creams/ointments from breast.
 - Use clean flanges with each pumping session.
- Label storage container with the date pumped and (if available) donor number.

DURING PUMPING

- Pump into a clean milk storage container.
- (We cannot accept glass jars or milk stored in ice cube trays)
- Fill storage bags only 3/4 full. Milk expands with freezing.
 - We will provide you with complimentary storage bags if needed.

AFTER PUMPING

- Freeze milk within 24 hours after pumping.
- You can mix breastmilk from different pump sessions - first refrigerate freshly pumped milk before combining it with previously refrigerated milk.
- Milk may not be donated if it has been heat-treated in any way. This includes warming, scalding, boiling, or thawed after freezing.
